

Safer Campuses, Stronger Communities

IONODES CitySafe allows educational institutions to share live and recorded video streams with authorized public safety partners and law enforcement Real-Time Crime Centers (RTCCs). This solution creates safer campuses where potential threats can be identified sooner, response times reduced, and students and staff better protected.

Featuring built-in Genetec™ Security Center VMS integration, IONODES CitySafe provides instant access to live and recorded video from any connected camera, from any remote site connected to IONODES CitySafe. The solution brings together disparate video surveillance systems to provide secure, comprehensive video monitoring and response capabilities—from a single pane of glass.

Enhance Campus Security with RTCC Integration

IONODES CitySafe is a secure, cost-effective and easy-to-deploy solution to bring modern RTCC capabilities to schools and universities. Strengthen campus-wide security while leveraging existing investments in surveillance infrastructure.

How It Works

IONODES CitySafe starts with the PERCEPT Gateway, a small onsite edge appliance that seamlessly connects to local IP cameras in a few short steps, without an onsite IT specialist. A secure and encrypted gateway for live video, the PERCEPT Gateway keeps local recording of all connected cameras for a configurable time.

Secure remote access to PERCEPT Gateways is provided by PERCEPT Cloud, a cloud-based device and video management platform that provides centralized management for any number of remote site gateways and cameras. PERCEPT Cloud offers device management and instant access to live and recorded video stored on every gateway through a simple, powerful web-based interface. No video is stored in the cloud.

IONODES CitySafe includes native support through a Genetec™ Security Center VMS plugin that allows your Genetec systems to securely connect to PERCEPT Cloud to access on-demand, live or recorded video from any camera, from any enrolled PERCEPT Gateway. This native integration allows law enforcement to ingest IONODES CitySafe live and recorded streams to support monitoring by officers trained on Security Desk and Citigraf.

What's Needed

IONODES CitySafe requires the deployment of one or more PERCEPT Gateways at each remote site. These PERCEPT Gateways are designed to work with any IP camera. If you don't currently have cameras installed at one or more sites, our team can help you choose the right cameras for your needs.

The PERCEPT Gateway is currently offered in two configurations. Choosing the correct model for your deployment will depend on how many cameras are connected at each site. Gateways come with everything needed to run your system for 3 years, including a subscription to PERCEPT Cloud and an IoT LTE data plan. The built-in and pre-activated LTE connectivity enables remote management and configuration and can be upgraded to provide guaranteed access to critical video streaming, regardless of onsite internet connectivity or bandwidth limitations.

PERCEPT Gateway Devices

PERCEPT GW08

Manages up to
8 cameras

PERCEPT GW32

Manages up to
32 cameras

How to Demo or Purchase
