

Real-Time Awareness and Individuals of Interest Alerts

Bringing together the IONODES PERCEPT Gateway and Verifyfaces for real-time awareness and individuals of interest notifications.

The joint solution combines advanced face-matching algorithms with a secure video centralization platform. Organizations gain real-time visibility into individuals of interest while benefiting from streamlined workflows and reduced operational costs. Seamless integration into existing security and public safety infrastructure enables faster emergency response, including automated 911 activation, and delivers actionable insights through business intelligence.

Delivering Actionable Insights

Centralized management of multiple remote locations, enriched with live awareness and analytics, to enhance safety, support smarter decision-making, and deliver scalable efficiency across industries.

Persons of Interest Detection

Real-Time Alerts Through Video

Live and Recorded Video On-Demand

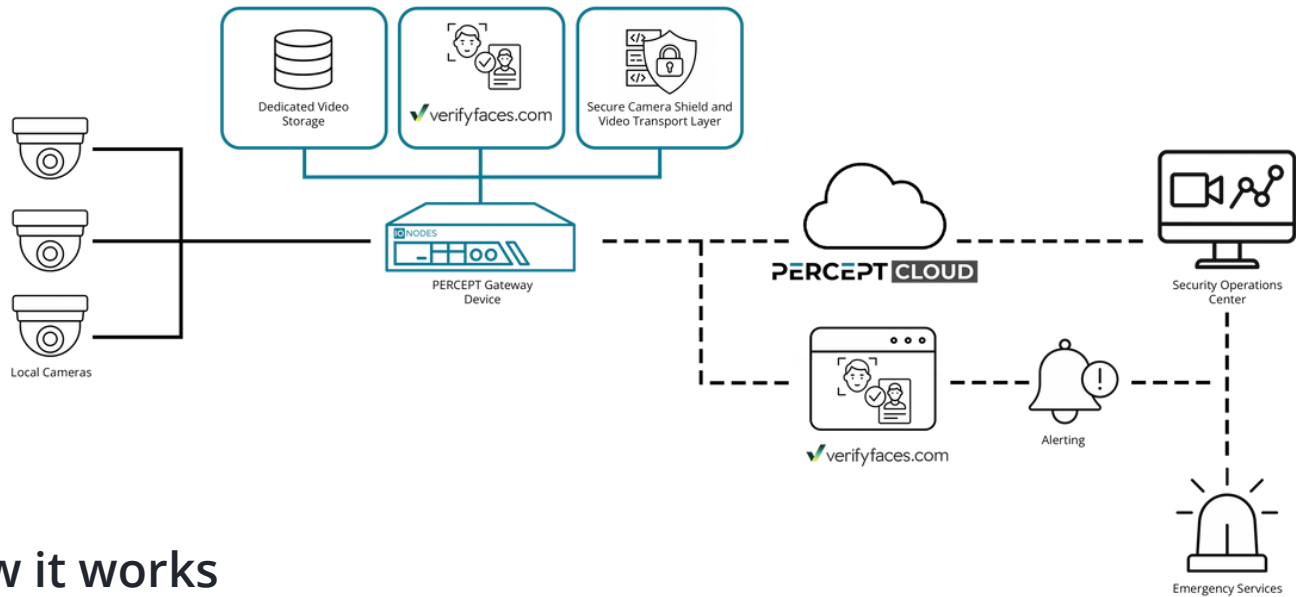

Customer & Flow Intelligence

911 Real-Time Alerts

Integration with existing system

How it works

The IONODES PERCEPT Gateway Solution securely shares live and recorded video from remote sites with Security Operations Centers and other centralized platforms running industry-preferred VMS solutions. Verifyfaces then applies advanced face-matching technology to these streams, enabling real-time detection of individuals of interest. All biometric data remains secure on-premises to ensure complete privacy protection. Real-time time-stamped events, analytics, and alerts are generated, empowering security teams to respond faster and more effectively.
